

Innovation Week 2024 at ENSET Mohammedia

Global Entrepreneurship and Innovation Week is a big deal at our school. It gets students thinking creatively and trying new things. We have events all week that are meant to inspire and teach students about entrepreneurship and innovation.

One cool thing we had during the week was hackathons and ideathons. These let students work together to solve real problems. This year, the hackathon was about making software or hardware for issues in Morocco, using stuff like Web 3.0, cybersecurity, AI, and blockchain. I tried to take part, but I had some problems and couldn't finish. The ideathon was all about coming up with new ideas and plans for businesses, which made us think hard and plan smart.

We also had conferences where experts talked about entrepreneurship and innovation. They brought together smart people from different areas to talk about cool stuff like AI and how it changes business. It was a good chance to learn from the best and understand new ideas.

At the end of the week, we had a party to celebrate the people who did well in the challenges. It showed how entrepreneurship and innovation can change things and how hard work pays off.
